

# Gear and Maximum Rollout Distance Tables

Please note that this table should be used as a guide only – measuring your bike on a rollout is the only way to get an exact result

The gear table below shows the distance travelled in metres per crank revolution when using 23mm tyres; whilst the colour coded Maximum Rollout Distance table helps locate the correct gear/sprocket combinations for each age group. This Gear Table should **only** be used as a **reference point** and **guide**. Tyres and tubs come in a range of different sizes and side wall widths and if your set up is close to max on the below table don't expect to be under the limit without first measuring. 25mm tyres will roll 2-3 cm longer than 23mm tyres. It is the **athlete's responsibility to ensure their bike is within the restriction**, no matter what combination of tyres, chainring and sprockets they have on the bike. We estimate +/- 2 cm error on any rollout done along side a tape measure. Please make sure you roll the bike out well in advance of racing so you have time to make any necessary adjustments

## Standard 700c rim with 23mm racing tyre
